

EQUINOX (9-CELL CLASSIC DESIGN)

Equinox is a 9 cell Hybrid canopy, Zero Porosity fabric for top skin and stabilizers combined with low permeability fabric for bottom skin, ribs and slider, together with its unique reinforced construction.

It uses extra reinforcement where needed (chordwise, spanwise, throughout the nose, and at all line attachment points).

The Equinox is engineered for student/novice jumpers looking for reliable openings, easy manoeuvrability, and comfortable pack volume. Students can then transition smoothly to other intermediate canopies. It is also the perfect choice for dropzones and schools in need of reliable and forgiving canopies for their AFF, S/L, Rental gear.

The Equinox encompasses rugged construction, cost effectiveness, and consistent openings during its life span. The Equinox has proven its effectiveness in both military units and private dropzones since 2000.

Like all sport canopies manufactured by CIMSA Ingeniería de Sistemas, Equinox is available in any size, although its optimum range falls between 190 and 300 sq.ft.

Model	P/N	Size (Sq.Ft.)	MSW (Lbs)	Weight (Lbs)
EQUINOX-189	317549-189	189	228	9
EQUINOX-209	317549-209	209	252	10
EQUINOX-239	317549-239	239	288	12
EQUINOX-259	317549-259	259	300	13
EQUINOX-279	317549-279	279	300	14
EQUINOX-299	317549-299	299	300	15
