

The Plus Tactical Ram-Air Canopies have been specifically designed for tactical military missions where reinforced structure, high gliding performance, effective canopy flying control and cost-effective maintenance become a mission requirement.

Plus canopies with Bay Pass (BP) configuration are mainly oriented to high altitude drops up to 25,000 Feet MSL and heavy weight up to 260 kg using a drogue system.

The unique By Pass configuration drives the drogue chute snath force produced during deployment directly to the suspension lines allowing the canopy fabric free of additional stress.

Four different sizes, 9 or 11-Cell and low porosity 0.5-3CFM fabric or Hybrid canopies (0CFM on top and 0.5-3CFM on ribs and bottom surface) are available. Part number 317563-() is possible to be used as reserve canopy too.

Model	PLUS-325BP	PLUS-325HBP	PLUS-360BP	PLUS-360HBP	PLUS-400BP	PLUS-400HBP	PLUS-440HBP
P/N Canopy	317563-325-1	317565-325-1	317563-360-1	317565-360-1	317563-400-1	317565-400-1	317564-440-1

Extreme Chord (m)	3.34	3.34	3.52	3.52	3.71	3.71	2.97
Span (m)	9.01	9.01	9.48	9.48	10.00	10.00	11.96
Aspect Ratio	2.70	2.70	2.70	2.70	2.70	2.70	3.50

The 9-Cell canopy P/N 317563-()-1 and P/N 317563-() are the same canopy.

Their only difference being on the slider; part numbers with -1 use collapsible slider (recommended for main canopies) and part numbers without -() use non collapsible slider (recommended for reserves canopies). All of them can be used as main and/or reserve.
